FLORA TERTIARIA HELVETIÆ, ETC.

By DR. OSWALD HEER, Professor of Botany at the University of Zürich, Switzerland. The Work is printed in small folio, with 100 (mostly) Coloured Plates. Price, for the Two Parts, £5. 15s. 6d.

This German Work contains a minute description and very accurate figures of all the Fossil Plants belonging to the Tertiary Flora which have been found in Switzerland and the adjacent districts; altogether, about seven hundred species; thus giving, for the first time, a complete Central European Flora of the Tertiary Epoch, arranged in systematic order. The *First Part* contains, on 50 Plates, the Cryptogamous, Gymnospermous, and Monocotyledonous Plants. The *Second Part* (also on 50 Plates), the Apetalous Dicotyledones. The *Third* (and last) *Part* will be ready shortly, and will contain the other Dicotyledonous Plants; closing with a general review of the principal facts which had been obtained by the study of the Tertiary Flora in connection with Geology and Botany.
